

IWCE 2015
March 18-19
(Conference: March 16-20)
Las Vegas Convention Center - North Hall

In order to minimize RF interference between demonstration radios on the IWCE show floor we are attempting to coordinate frequencies in use by exhibitors in their booths.

In addition, having this information will assist in preventing interference from local transmissions in the area surrounding the Convention Center. We will try to determine if any local licensee has frequencies that may interfere with your demo equipment.

Please provide the following information for all transmitters you believe will be operational during the show.
