

Connecting Critical Communications

March 30-April 3, 2020  
Las Vegas Convention Center  
Las Vegas, NV

**RF Interference Form**

In order to minimize RF interference between demonstration radios on the IWCE show floor we are attempting to coordinate frequencies in use by exhibitors in their booths.

Please provide the following information for all transmitters you believe will be operational during the show.

For reference, within one mile of the Las Vegas Convention Center there are more than 450 radio licenses currently in use between 150 MHz and 870 MHz according to the FCC. Providing the requested information will assist in preventing interference from local transmissions in the area surrounding the Convention Center. We will try to determine if any local licensee has frequencies that may interfere with your demo equipment.

Please provide the following information for all transmitters you believe will be operational on all frequencies lower than 900 MHz during the show.

RETURN no later than February 28, 2020
