Multiple small monitors	210–350 Watts	
Large Light Box	60–80 Watts	
Inkjet printer	20–30 Watts	
Small power tool (not running concurrently with other items)	600–900 Watts

The numbers above are approximations. EventNow suggests referencing the equipment plate or stamp generally located on the back or bottom of each electrical device for specific power consumption information, then make the corresponding power request appropriate to the combined power needs of all equipment that will be run concurrently to avoid tripping/outages during the event.

Please Note: Multiple combinations of the above examples may require additional circuit requests.

This table is for 120 Volt Service. Circuits greater than 120 Volt will need consultation with power services team members in your region.
