

LEAD RETRIEVAL / DATA CAPTURE

Capture the contact details of everyone who visits your booth at **ADAS & Autonomous Vehicle Technology Summit North America** with our simple-to-use Visit Connect automatic lead-retrieval system.

We will be offering the GES Visit Connect Scan App.

- Collect leads by scanning badges of sales prospects using the Visit Connect app on your smartphone or tablet
- Obtain comprehensive lead data to enable easy client follow-up
- Plan, monitor and measure event performance with the powerful tracking tools
- The system is extremely good value: just \$376 for the duration of the show

Once you place an order, a Visit Connect account will be created and access information will be sent to you prior to the show, along with information on how to download the Scan App if applicable. This will enable you to familiarise yourself with the system as well as set your show targets and build your bespoke questions and 'action tags' in advance. The account remains fully operational after the show so you can utilise the post-show lead-management features.

For any questions, please email leads@ukimediaevents.com.

Real-time lead retrieval is now a reality* - the Scan App allows you to: scan a visitor's badge; retrieve contact details; add notes, photos, or voice memos; log answers to questions and much more. You can use the app via tablet or smartphone, iOS or Android, and can scan on- or offline and can even mail leads direct from each device into an excel spreadsheet. Details will be held on your device and synchronised to the web portal which will hold all lead information.

If you want to see an overview of how the system works, you can watch our short video [here](#).

*Real-time lead retrieval on your tablet and smartphone is only available if your device has an internet connection at the show. The Scan App can scan badges offline and will be synchronised as soon as a connection is available. Clients are expected to provide their own smartphones, laptops or tablet PCs.
